CONFIDENTIAL

THE COUNCIL FOR TOBACCO RESEARCH - U. S. A.

February 16, 1966

MEMORANDUM

TO: The committee comprising Dr. Reimann, Chm., Dr. Lynch and Dr. Jacobson.

FROM: Robert C. Hockett and Vincent F. Lisanti

SUBJECT: Renewal application from Maurice S. Segal, M.D. - No. 405R2.

Enclosed is a renewal application accompanied by an outline progress report covering the first eighteen months of project activities from Dr. Maurice S. Segal of the Boston City Hospital (Tufts) Lung Station, Boston, Massachusetts.

This renewal application is for the final year of a three year award, which was initiated on July 1, 1964.

The activities of Dr. Segal and his associates especially in the last year or two have been both productive and meritorious. They have not only performed as proposed but have exceeded their overall program by the introduction of new parameters for evaluation.

The new facilities have been visited by both staff members and were found to be beyond our expectations.

Both private and Federal funds have made the facilities and equipment possible.

Because of the complexities of the problem area and the need for more clearly defined terms the Scientific Advisory Board should anticipate continued support for additional periods of time, certainly three and perhaps six years.

It seems that the productivity and clarification of these problem areas will assist the medical profession and contribute to the knowledge of the role that smoking plays.
